

LORE

stories you carry

A living media companion for the worlds, characters, clues, comfort shows, and unfinished feelings we keep with us.

Part origin story, part brandbook, part prototype plan.

Current state: first-flow prototype logic locked. Visual system forming. Research workbook built. Figma design in progress.

Every story leaves a trace.

let's discover yours

Explore my LORE

The spark: it started with two instincts

TV Time loss gave the problem. Detroit, Soul, Up, Co-Star and Wrapped shaped the emotional logic.

01

TV Time disappearing

People do not only lose progress. They lose rituals, comments, lists, followers, and little proof of their media life.

02

Detroit: Become Human

Choices should matter. If I predict, choose, return, or abandon something, the app should remember.

03

Soul + Up

The ordinary moments around stories matter. The feeling left behind is part of the archive.

04

Co-Star + Wrapped

Personal data can become identity, conversation, and a shareable ritual when it feels specific and earned.

The idea became: what if my stories could show me who I am becoming?

What LORE is

Tracking is the doorway. Meaning is the product.

LORE is a mobile-first media companion that turns watch history into a living map of taste, memory, identity, and recurring viewing instincts.

It begins with a short discovery flow, reveals a provisional viewing archetype, then invites the user to expand their archive with the stories that shaped them.

Not another tracker.

A place where stories become a language for understanding yourself.

Honest framing: based on your first three choices.
Your LORE will change as your archive grows.

The research made the product more honest

Genre alone is too weak. Motive, context, characters, comfort and discovery matter.

1	LORE Research Workbook									
2	Evidence-led foundations for a living media companion. Research completed 2026-07-28.									
3	Research objective	Build a short first flow that feels personally accurate without pretending to diagnose ...	Scope	Viewing identity, motives, archive behavior, popularity, social sharing, ethics,						
4										
5										
6	Evidence dashboard		Value	What the research supports						
7	Total sources reviewed	38		1	A three-question prototype is reasonable only if the result is presented as provisional and evidence-linked.					
8	High and Medium-High sources	22		2	Genre alone is too weak. The three questions should cover recognition, motive, and social or emotional behavior.					
9	Medium sources	6		3	The strongest five dimensions are pattern seeking, character attachment, world immersion, comfort and memory, and discovery.					
10	Low sources used only for hypotheses	10		4	Comfort viewing must have equal status with novelty. Repeat libraries dominate real streaming time.					
11	Peer-reviewed or systematic sources	7		5	Mainstream plus selective discovery is the natural mix. The proposed content pool is intentionally under 20% niche.					
12	Popularity observations	40		6	True crime needs ethical distance from playful fictional mystery mechanics.					
13	Niche share in proposed content pool	13.3%		7	The archive invitation should begin with five meaningful stories, not a demand for complete history.					
14				8	Share cards work best when users can see, edit, or reject the evidence behind the result.					
15										
16	Recommended first-flow position									
17	LORE should not promise to reveal a person's personality from watch history. It can credibly offer an evolving viewing archetype based on what they choose, why they stay, what they return to, and how they discover. The first result should say: Based on your first three choices. Your LORE will change as your archive grows.									
18										
19										
20										
21	Evidence grades									
22	High	Peer-reviewed research, systematic review, official independent audience measurement, or official product documentation.								
23	Medium-High	First-party platform data or official community data with a clear scope and direct product relevance.								
24	Medium	Preprints, academic manuscripts, or commercial benchmarks useful for design hypotheses but not final claims.								

38

evaluated sources

40

popularity observations

30

coded titles

5

evidence-informed dimensions

LORE should learn how someone experiences stories, not claim to diagnose them from genres.

The two audiences merged into one smarter model

Not male genres vs women genres. Five ways people enter stories.

Pattern seeking

Severance · Dark · True Detective

Character attachment

The Sopranos · Succession · Big Little Lies

World immersion

Westworld · Fallout · Silo

Comfort and return

Friends · The Office · Ted Lasso

Discovery behavior

Banshee · Bad Sisters · Black Bird

The product becomes broader and more respectful when it asks how people relate to stories instead of forcing demographic assumptions.

Brand world: Digital Paper Universe

Clean modern UI. Handmade humanity. Cozy without scrapbook. Playful without childishness.

UI = digital intelligence

Precise, calm, minimal, mobile-first and easy to learn.

Illustrations = human imperfection

Hand-drawn objects bring soul without turning the product into a craft app.

Motion = consequence

Small reactions show that the app heard the user. No bouncing reward noise.

Tone = companion first

The app observes gently, then challenges occasionally.

A sophisticated digital object that feels like it has a soul.

Color system

Purple holds the unknown. Gold holds the spark. Paper and ink keep it usable.

Lore Gold

#FFB300

discovery, selected states, reveals

Lore Purple

#3801AE

universe, story maps, special moments

Ink Black

#17151F

main text, mature contrast

Paper Light

#FFF8E8

archive surfaces, warm reading

Lavender

#B9A7FF

soft mystery, gentle glows

Pink Accent

#FF5DA2

rare emotional intensity

Sage

#A8B89A

memory, growth, completion

Soft Blue

#A9D6E5

reflection and calm guidance

Use gold like a clue. Use purple like a room.

Typography and voice

Space Grotesk direction for the system. Comic Neue only for small companion moments.

System voice

Space Grotesk direction

Titles, navigation, buttons, logic, hierarchy. It keeps LORE structured and modern.

Example: Where do you disappear?

Companion voice

stories you carry

Used sparingly for little observations. Never for dense information or navigation.

Example: this is only the first layer

Companion voice, 80%. Game voice, 20%.

Icon and illustration language

A human drew this in 20 seconds, but a designer placed it carefully.

Single visual grammar

rough line, simple geometry, uneven curves

Editable vectors

icons can become ink, gold, purple or white

No emoji dependency

the system has its own handmade language

Creatures later

start with objects, introduce creatures slowly

First flow logic

Three questions. Five results. One evolving profile.

FIRST FLOW - LOCKED CONTENT LOGIC

3 questions · 5 main archetypes · 1 evolving profile

LOCKED PRODUCT RULE

FREE FIGMA BUILD

The exact three-question spine

A short flow that feels alive without becoming homework.

Q1 · Context

Where do you disappear?

The stories you love say more about you than you think.

Records story door and recognition.

Q2 · Main motive

Then something changes. What makes you press Next?

This sets the primary archetype.

Highest weight.

Q3 · Secondary pull

Tonight, only one wins. Which story do you choose?

This refines the result.

Lower weight.

The quiz feels personal because the scenario changes, but the result stays honest.

Five first LORE archetypes

Shareable, specific and provisional. No fake personality science.

Pattern Hunter

You stay for the moment the pieces begin to move.

Character Witness

You remember what people choose when the story makes it difficult.

World Cartographer

You do not just follow a plot. You learn the rules of its world.

Memory Keeper

Some stories become places you return to.

Story Scout

You are always looking for the story worth passing on.

**Result qualifier: Based on your first three choices.
Your LORE will change as your archive grows.**

After the reveal: the first home should already feel alive

No empty state. No completion pressure. Start with the data the user just gave us.

Why this matters

The home screen should reinforce that LORE has already listened, but still needs real archive data to become useful. This protects user trust and creates a natural next action.

"Add five stories that shaped you" feels more human than "complete your profile."

Do not show: empty progress bars, watch-hour rankings, or "0% complete."

Figma build plan

Free Figma can simulate a living quiz through a controlled decision tree.

01

Screen 2

Q1 story-door cards with selected states

02

Five Q2 frames

Scenario line changes from Q1

03

Five Q3 frames

Primary path continues, Q3 adds secondary pull

04

Result component

Main archetype plus secondary streak

05

Five home states

Personalized first home and archive CTA

06

Testing

Watch for “that is me” moments and confusion

What happens next

Design one short flow deeply before expanding the universe.

-  **Now** Finish Screen 2 and lock card components.
-  **Next week** Build Q2, Q3, result screens and first home states.
-  **First test** Give the prototype to real people and watch emotional reactions.
-  **After test** Revise copy, archetype specificity and paths based on resonance.
-  **Portfolio** Document research logic, design decisions and test feedback.
-  **Product later** Archive, import, story maps, spoiler-safe rooms, predictions, localization.

The first prototype only needs one job: make people feel seen enough to want the next layer.

LORE manifesto

I want LORE to feel smart, but not cold. Cozy, but not cute. Playful, but not childish. Personal, but not invasive. Alive, but not overwhelming.

A show can be a comfort object. A character can become a reference point. A mystery can become a mental room. A recommendation can become part of a friendship.

LORE is a place where the stories you love become a language for understanding yourself.

stories you carry
